

## **TEST REPORT**

| 1.0                      | Description of Unit Under test<br>(UUT): |               | Description:  | Automotive Battery<br>12V/150AH |  |  |
|--------------------------|--|---------------|---|---------------------------------|--|--|
|                          |  |               | Rating:   |                                 |  |  |
|                          |  |               | Model No:   | N 150                           |  |  |
|                          |  |               | Standard:   | JIS: D5301-2006                 |  |  |
| 2.0                      | Type of Test:                            |               | 1.Battery Measurement L*W*H (9.4.1/b) 2.Activation of Dry Charged Battery (9.3) 3. Charging (9.4.2/a) 4. Capacity Test (9.5.2/a). 5 CCA(9.5.3) 6 Polarity or Marking (12/a/2) |                                 |  |  |
| Test Report No: Descript |  | ion: 12V/150A | H Serial No:  |                                 |  |  |
|                          | Automot                                  |               | tive Battery  | Model:N150                      |  |  |

Test Result:

| S.no             | Clause | Specification Requirement |    |    |  |
|------------------|--------|---------------------------|----|----|--|
| Test Description | 32     | 33                        | 34 | 35 |  |

| 01 | 9.4.1/b | Battery Measurement L*W*H  |               |               |               |               |
|----|---------|--|---------------|---------------|---------------|---------------|
| 02 | 9.3     | Activation of Dry Charged Battery The Dry charge battery shall be filled with the appropriate to the maximum level indicated by internal or external marks of the battery or in accordance with the manufacturer's instructions.                         | 2min<br>50sec | 2min<br>51sec | 2min<br>51sec | 2min<br>50sec |
| 03 | 9.4.2/a | Charging Constant Current Charging Method1. The battery is charged with 5h rated current Is until the terminal voltage or the electrolyte density converted to temperature shows a constant value three times consecutively on every 15 min measurement. | Achieve       | Achieve       | Achie<br>ve   | Achie<br>ve   |
| 04 | 9.5.2/a | Capacity Test Reserve Capacity Test The battery shall be discharged with current of 25A±1% until the voltage falls to 10.50V±.05V  | 290 min       | 286 min       |               |               |

| 5  | 9.5.3      | Cranking Performance Test (CCA)  | 750  | 750  |  |   |
|----|------------|--|--|--|--|---|
| 3  | 9.5.3      | After the completion of charging approximately between 1h to 5h lapse, the battery shall be placed in a cooling chamber at a temperature of -18°C ± 1°C for a minimum of 24 h or until the temperature of the electrolyte of either cell in the centre position has reached -18°C ± 1°C.  The battery shall then be discharge with in 2 min after the cooling with nominal cold cranking current for 30 s.  The terminal voltage after 30 s from the start of discharging shall be recorded.  After the cold cranking ampere test, the battery is left for 20s ± 1s.  The duration of discharging is recorded when the battery is discharged with the discharging current of .6 *lcc until the voltage falls to 6Volt. | 750  | 750  |  |   |
| 06 | 12         | The following information shall be adequately designated on each battery.  a) Type designation. b) Nominal voltage (12V) c) Rated capacity (RC) d) Supplier's name and / or trade mark e) Year and month of manufacture or abbreviation  | Battery are<br>maked with<br>Automotive<br>Battery 12V<br>RC 280min<br>Sparco<br>Batteries<br>Pvt.Ltd.<br>Abbreviatio<br>n | Battery are maked with Automoti ve Battery 12V RC280min Sparco Batteries Pvt.
